

DZS8 (3RV) series motor protection circuit breaker (motor protection switch) is suitable for circuits with AC 50/60Hz, rated working voltage 660V, and rated current 0.11A-25A. It is used for starting and disconnecting three-phase induction motors, as well as for phase loss, overload, and short circuit protection. It can also be used for distribution line protection and as an isolator.

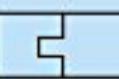

### The model and meaning

### Specifications

The recommended data for four-phase standard electromotor under the condition of AC50Hz, 400V. What affects the product most is the factual starting data and rated data of the protected electromotor.

# The Protection Characteristic Against Over-current of The Breaker

The multiple of rated current	Starting state	Stipulated time	Due result	The temperature of ambient air
1.05	Cold state	$t \geq 2h$	No disjoining	$+20^{\circ}\text{C} \pm 2^{\circ}\text{C}$
1.2	Hot state (rises up to the stipulated current after following the test of No 1)	$t < 2h$	Disjoining	
1.5	One-time commuting current Starts after the bot balance	$t < 2\text{min}$	Disjoining	
7.2	Cold state	$2 < t \leq 10\text{s}$	Disjoining	

## Tripping Characteristic Curve

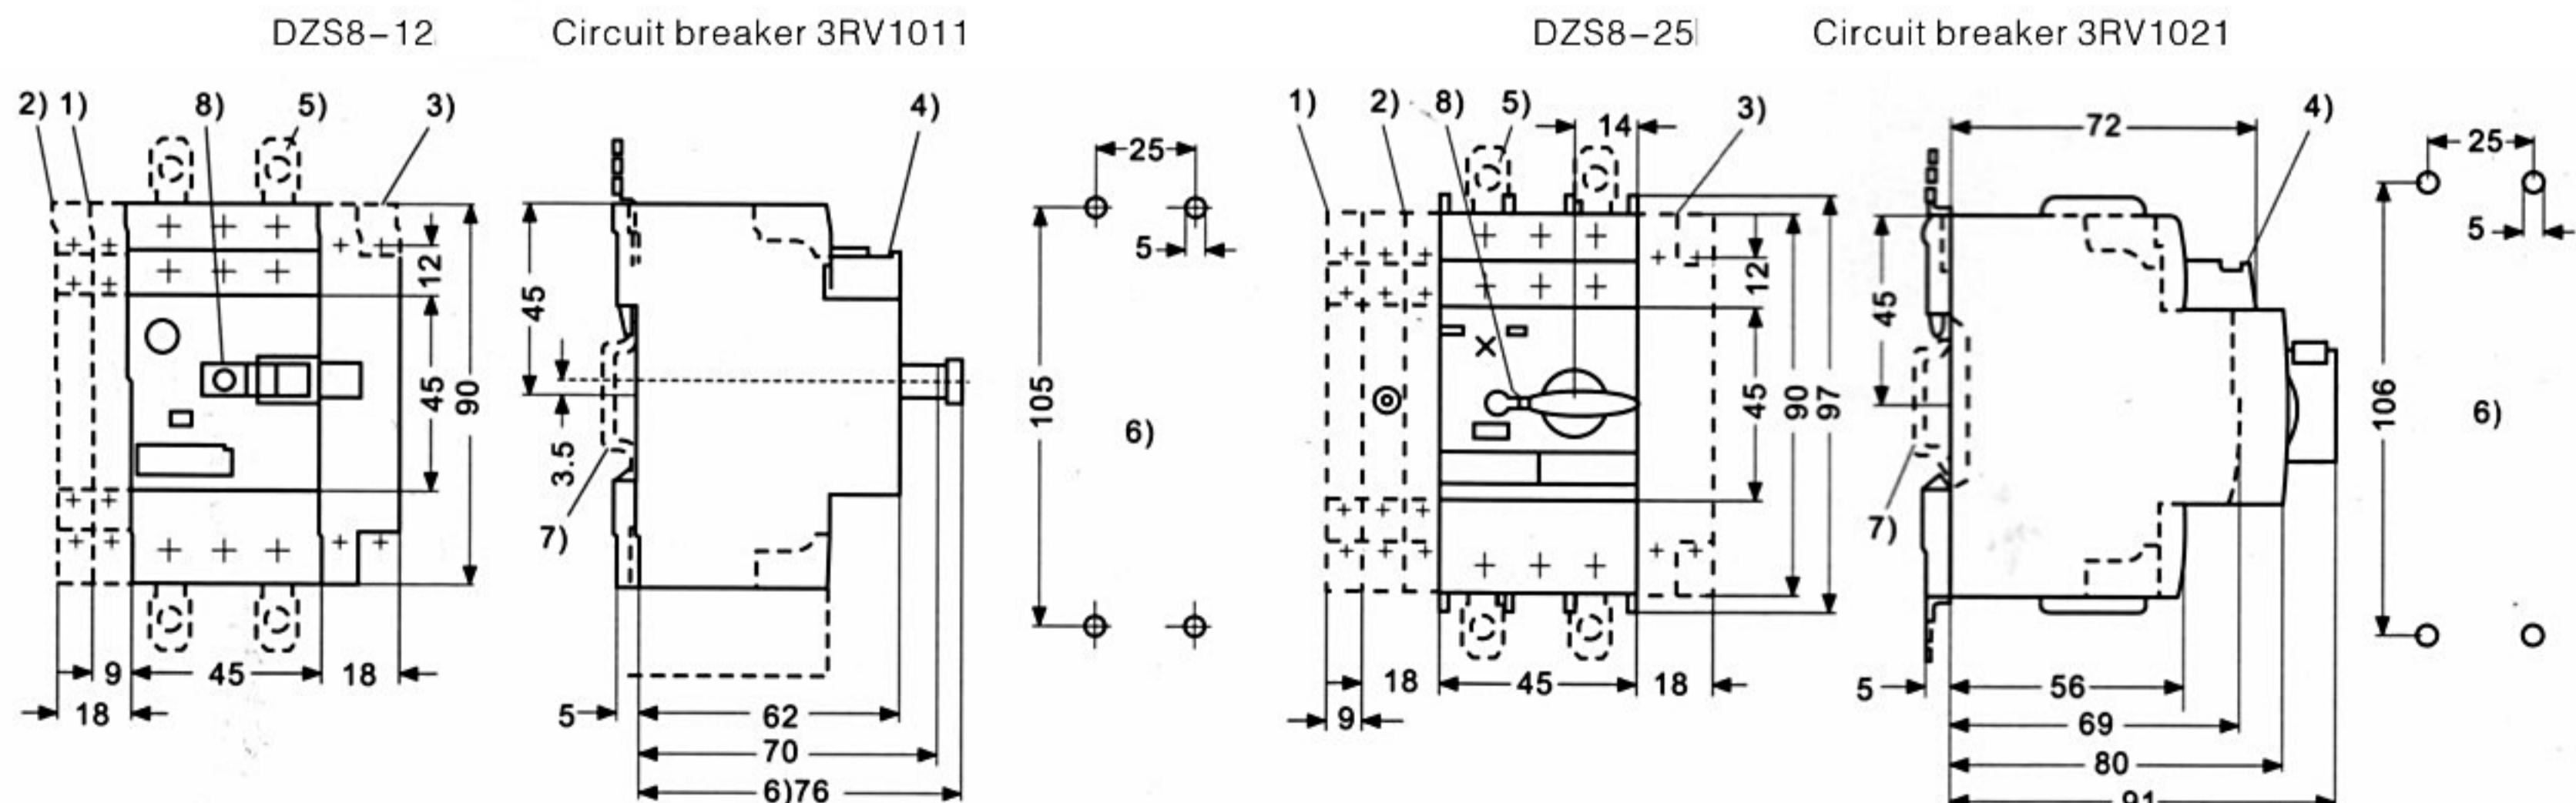

Load tripping grade of the phasel and phase 2 is 10

Load tripping grade of the phase2 and phase 3 is 10

Load tripping grade of the phase3 and phase 3 is 10

## The external fixing dimension

1. 2-pole side supplementary switch; 2. signal switch or 4-pole side supplementary switch; 3. supplementary releaser;
4. transverse supplementary contact; 5. patching slice for screw installation; 6. punching template; 7. 35mm standard installation guideway;
8. lock the location of breaking the diameter of the staple is 3.5mm or 4.5mm.
